

- 
- The image displays a dense field of small circles on a black background. The circles are colored cyan and yellow. A legend in the top right corner identifies the cyan circles as 'detection' and the yellow circles as 'expert annotation'. The circles are distributed across the entire image, with a higher concentration in the lower-left and lower-right areas, and a sparser distribution in the upper-left area. The circles are of varying sizes and are often clustered together, suggesting a complex spatial distribution of the data points.
